Activity Description in Nutshell:

An add-on course was organized by the Department of Computer Engineering for Second-year students on 16th, 22nd, 23rd, 30th October 2021. This 4 days course included the explanation of different concepts like Cloud Computing, the Linux Operating System, Git and GitHub, Docker & its networking. Mr. Shashank Gaikwad discussed Cloud Computing's importance along with different examples. Students enjoyed experimenting with different Linux commands. It included the hands-on experience for our students by deploying various applications on Docker. The course ended with the question and answer session with students helped clear their doubts about the various topics they learnt through this course.
